Education

Bachelor of Science in Data Science <i>FAST National University of Computer and Emerging Sciences (NUCES)</i>	Aug 2021 – May 2025 <i>Lahore, Pakistan</i>
ICS <i>Government College University (GCU)</i>	Aug 2019 – Mar 2021 <i>Lahore, Pakistan</i>
Matriculation <i>Beacon House School System (BSS)</i>	<i>Lahore, Pakistan</i>

Experience

Software Engineer Intern Techlogix – Reduced open bug backlog by an estimated 30%, as measured by sprint velocity, by refactoring FastAPI backend services, implementing RBAC-based access controls, and contributing to CI/CD pipeline reviews.	Apr 2026 – Present
AI-Based Learning Web Application Developer Online Academy – Built an LLM-powered AI tutor feature in a responsive React frontend, accelerating course content production by roughly 35% through automated AI agent workflows in a 6-member Agile team.	Jan 2026 – Feb 2026
DevOps Intern Systems Limited – Cut manual deployment time by roughly 5 hours/week and incident resolution time by an estimated 40% by automating Microsoft Azure VM provisioning and documenting standardized deployment procedures.	Sep 2025 – Nov 2025
Software Development Intern Techverx – Reduced defect rate by an estimated 20%, as measured by QA test pass rate, by debugging and testing feature releases under senior developer mentorship.	Jun 2024 – Aug 2024

Projects

AI-Powered Clinical Intelligence OS (CIOS) Full-Stack + AI/ML + DevOps – Built a hospital ERP with a 3-stage Clinical Intelligence Pipeline: ML risk scoring with SHAP-style explainability, qSOFA sepsis screening, and Claude API-powered clinical assessments, across 9 Dockerized microservices. – Implemented JWT auth with RBAC (5 roles, 28+ permissions) and a Kafka-ready event bus for real-time clinical messaging and specialist referrals. – Engineered a 24/7 async AI Monitoring Agent and WebSocket-based ICU telemetry system, cutting estimated manual chart-review effort by roughly 40%.	May 2026 - June 2026
BodyPose Observatory – Built a real-time 3D human pose visualization dashboard using MediaPipe Pose Landmarker and Three.js, rendering live webcam skeletons with fall detection and vital-sign HUD overlays across 13 monitoring scenarios.	March 2026 - April 2026
RAG Chatbot System – Built a document-grounded question-answering chatbot using LangChain and ChromaDB for retrieval-augmented generation over user-uploaded documents.	Jan 2026 - Feb 2026
MLOps Production Pipeline – Designed an end-to-end MLOps pipeline with MLflow experiment tracking, Dockerized deployment, and automated drift detection/monitoring.	Aug 2025 - Sept 2025
Deep Fake Audio Detection (FYP) – Developed BERT/VGG16-based ML models to detect AI-generated Urdu voice scams, with a web interface for real-time predictions and accuracy optimization.	Sep 2024 – Jun 2025

Technical Skills

AI/ML: LLM Integration (Claude API), BERT (Transformers), SHAP, scikit-learn, PySpark
Backend: Python, FastAPI, Flask, REST APIs, JWT/RBAC, SQLAlchemy
Frontend: React, Bootstrap, HTML, CSS
Databases: PostgreSQL, MySQL, Redis
Cloud & DevOps: Microsoft Azure, Docker, Docker Compose, CI/CD
Developer Tools: Git, PyCharm, VS Code
