Education

Bachelor of Science in Data Science <i>FAST National University of Computer and Emerging Sciences (NUCES)</i>	Aug 2021 – May 2025 <i>Lahore, Pakistan</i>
ICS <i>Government College University (GCU)</i>	Aug 2019 – Mar 2021 <i>Lahore, Pakistan</i>
Matriculation <i>Beacon House School System (BSS)</i>	<i>Lahore, Pakistan</i>

Experience

Software Engineer Intern Techlogix – Developing and maintaining full-stack web applications for enterprise clients using modern technologies. – Collaborating in Agile teams on feature development, testing, and deployment. – Contributing to system architecture discussions and code reviews.	Apr 2026 – Present
AI-Based Learning Web Application Developer Online Academy – Developed an AI-powered learning platform with courses, quizzes, and AI tutors. – Worked in a 6-member team to automate AI agents and create teacher-assisted course content. – Built a responsive UI and collaborated on development using agile practices.	Jan 2026 – Feb 2026
DevOps Intern Systems Limited – Worked with Microsoft Azure services including VMs, resource management, and deployments. – Participated in Agile stand-ups, sprint meetings, and technical discussions. – Documented deployment and troubleshooting procedures.	Sep 2025 – Nov 2025
Software Development Intern Techverx – Assisted in feature development, testing, and debugging while following clean code practices. – Collaborated with senior developers to understand architecture and Agile workflows.	Jun 2024 – Aug 2024

Projects

AI-Powered Clinical Intelligence OS (CIOS) Full-Stack + DevOps – Built a hospital management system with AI insights, real-time patient monitoring, and 9 Dockerized microservices. – Implemented patient lifecycle management with automated discharge reports and ICU synchronization. – Deployed the platform using Docker Compose with FastAPI, React, PostgreSQL, Redis, and Nginx. – Developed an ICU monitoring system with WebSocket streaming and ML-based risk prediction.	2026
Deep Fake Audio Detection (FYP) – Developed ML models to detect AI-generated Urdu voice scams using BERT-based architectures. – Designed a web interface for users to upload audio files and receive real-time predictions. – Performed model evaluation and optimization to maximize detection accuracy.	Sep 2024 – Jun 2025
FAST Care — Blood Donation Management System – Built a full-stack web app using Flask, MySQL, Bootstrap, and JavaScript. – Automated donor matching and request tracking system, reducing response time. – Developed modules for volunteer management and donation campaigns. – Collaborated in a team of 5, following agile practices for timely delivery.	Feb 2023 – Jun 2023

Technical Skills

Programming: Python, C/C++, SQL, Assembly, HTML, CSS
Frameworks & Tools: Flask, Bootstrap, REST APIs, BERT (Transformers), PySpark, Hadoop, MapReduce, FastAPI, React, Docker, Docker Compose, PostgreSQL, Redis
Databases: MySQL, PostgreSQL
Cloud & DevOps: Microsoft Azure (Fundamentals), Docker
Developer Tools: PyCharm, VS Code
